BioHaven Floating Wetland Pre-Established Coir Pallet (1x2m)

our standard mix

Planted at a rate of 20 plants per m² and grown outdoors in wet beds to create a hardy plant and will be supplied with the roots of plants growing extensively through the coir.

These are stapled onto the islands for instant impact and ensure successful establishment and can be used for year round planting. Additional plug plants can be added to the coir pallet to create a unique planting scheme.
